

TURNING A TWITTER HASHTAG INTO A WORD CLOUD

Jennifer Pannell
Ecology postdoc, AUT

WAIT, WHAT?

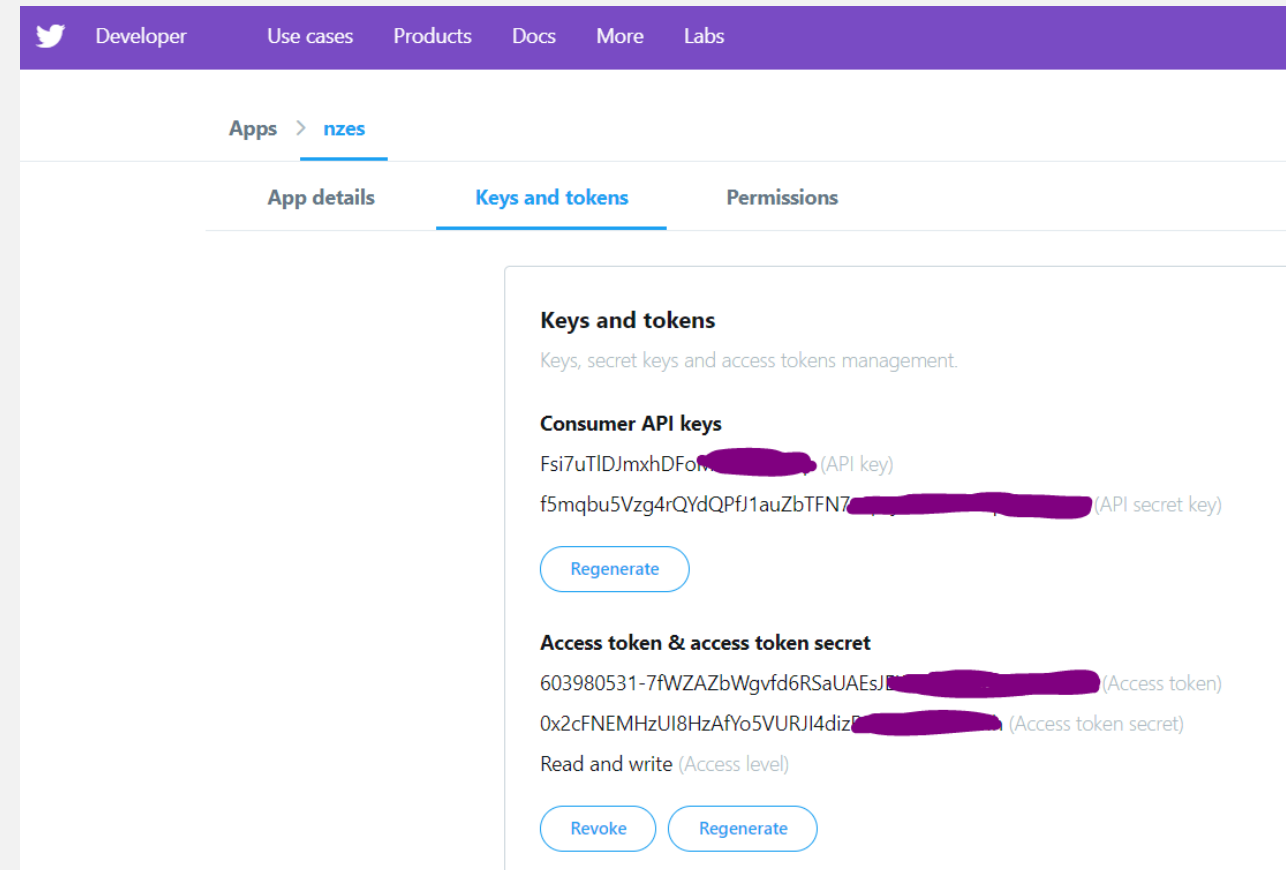

- Turn the tweets into a word cloud

@jennypannell

STEP 1: GET TWITTER CREDENTIALS

- Go to <https://developer.twitter.com/en/apps>
- Create a blank app
- Copy consumer API keys, access token & secret

The screenshot shows the Twitter Developer Portal interface. At the top is a purple navigation bar with links: Developer, Use cases, Products, Docs, More, and Labs. Below this is a breadcrumb trail: Apps > nzes. The main content area has three tabs: App details, Keys and tokens (which is selected), and Permissions. Under the 'Keys and tokens' tab, there is a section titled 'Keys and tokens' with the subtitle 'Keys, secret keys and access tokens management.' Below this, there are two sections: 'Consumer API keys' and 'Access token & access token secret'. The 'Consumer API keys' section displays an API key (Fsi7uTIDJmxhDFo...) and an API secret key (f5mqbu5Vzg4rQYdQPfJ1auZbTFN7...), both redacted with purple boxes. A 'Regenerate' button is located below these keys. The 'Access token & access token secret' section displays an access token (603980531-7fWZAZbWgvfd6RSaUAESJ...) and an access token secret (0x2cFNEMHzUI8HzAfYo5VURJI4diz...), both redacted with purple boxes. Below these, the access level is shown as 'Read and write (Access level)'. At the bottom of this section are 'Revoke' and 'Regenerate' buttons.

Developer Use cases Products Docs More Labs

Apps > nzes

App details Keys and tokens Permissions

Keys and tokens
Keys, secret keys and access tokens management.

Consumer API keys
Fsi7uTIDJmxhDFo... (API key)

603980531-7fWZAZbWgvfd6RSaUAESJ... (Access token)
0x2cFNEMHzUI8HzAfYo5VURJI4diz... (Access token secret)
Read and write (Access level)
Revoke Regenerate

PACKAGES REQUIRED: twitteR

STEP 2: SCRAPE THE HASHTAG

Search parameters, and max no.
tweets to return

Provide credentials and connect to twitter

```
25
26 ## Get the data
27 ```{r connect to twitter}
28
29 consumer_key <- 'Fsi7uTlDJmxhDFoMamPRIPfHp'
30 consumer_secret <- 'f5mqbu5Vzg4rQYdQPfJ1auZbTFN7vepEjL8DoxF9nqKwh2vK75'
31 access_token <- '603980531-7fwAZbWgvfd6RSaUAesJEi00XkwPoRys2CdFVkm'
32 access_token_secret <- '0x2cFNEMHZUI8HzAfYo5VURJI4dizRsQBijlFjzfHzoHh'
33
34 setup_twitter_oauth(consumer_key, consumer_secret, access_token, access_token_secret)
35
36
37 [1] "Using direct authentication"
38
39 ```{r download tweets}
40
41 kind_twitter <- searchTwitter("#kindnessInScience",since='2017-01-01',n=5000)
42
43 kind_twitter_df <- twListToDF(kind_twitter) # Convert to data frame
44
45 # only returns tweets from last 7 days due to the API the package uses
46
47 rm(kind_twitter, kind_twitter_df, consumer_key, consumer_secret, access_token, access_token_secret)
48
49 5000 tweets were requested but the API can only return 20
```

PACKAGES REQUIRED: twitteR

STEP 2: SCRAPE THE HASHTAG

Search parameters, and max no.
tweets to return

Provide credentials and connect to twitter

- Issue: twitter only allows searching back as far as 7 days
- Python alternative using screen scraping: <https://github.com/taspinar/twitterscraper>

```
25
26 ## Get the data
27 {r connect to twitter}
28
29 consumer_key <- 'Fsi7uTlDJmxhDFoMamPRIPfHp'
30 consumer_secret <- 'f5mqbu5Vzg4rQYdQPfJ1auZbTFN7vepEjL8DoxF9nqKwh2vK75'
31 access_token <- '603980531-7fwAZbwgVfd6RSaUAesJEi00XkwPoRys2CdFVkm'
32 access_token_secret <- '0x2cFNEMHZUI8HzAfYo5VURJI4dizRsQBijlFjzfHzoHh'
33
34 setup_twitter_oauth(consumer_key, consumer_secret, access_token, access_token_secret)
35
36
37 [1] "Using direct authentication"
38
39 {r download tweets}
40
41 kind_twitter <- searchTwitter("#kindnessInScience",since='2017-01-01',n=5000)
42
43 kind_twitter_df <- twListToDF(kind_twitter) # Convert to data frame
44
45 # only returns tweets from last 7 days due to the API the package uses
46
47 rm(kind_twitter, kind_twitter_df, consumer_key, consumer_secret, access_token, access_token_secret)
48
49 5000 tweets were requested but the API can only return 20
```

PACKAGES REQUIRED: twitteR

STEP 2: SCRAPE THE HASHTAG

14	inclusive	11
15	research	11
16	cillawehi	10
17	diversity	9

PACKAGES REQUIRED: tm, tidytext, stringr

STEP 3: CLEAN UP TWEET DATA

Break up tweets into vector of single words

```
## Tidy up the text
# Tweet text needs to be tidied by splitting into words, removing punctuation and numbers
# and words like "the", "and", etc.
# {r} triangle data and tidy
# make sure the tweets are stored as character data
kind$text <- as.character(kind$text)

# before we split up, make sure any words that need to stay together are replaced
kind$text <- gsub("te reo", "tereo", kind$text)
kind$text <- gsub("ka rawe", "karawe", kind$text)
kind$text <- gsub("kia ora", "kiaora", kind$text)
kind$text <- gsub("kia kaha", "kiakaha", kind$text)

# use the unnest_tokens function in tidytext to make the word frequency table
# make into data frame with 1 row per word

kindTable <- kind %>%
  unnest_tokens(word, text)
```

Remove unwanted words, punctuation, numbers, etc

```
# remove numbers and punctuation
kindTable$word <- removeNumbers(kindTable$word) # remove numbers & punctuation
kindTable$word <- removePunctuation(kindTable$word)
kindTable <- kindTable[!(is.na(kindTable$word) | kindTable$word == ""), ] # remove
blank/whitespace words

# remove stop words - aka typically very common words such as "the", "of" etc
# now 7770 words
data(stop_words)

kindTable <- kindTable %>%
  anti_join(stop_words)

rm(stop_words)

# add word count to table
kindTable <- kindTable %>%
  dplyr::count(word, sort=TRUE)
```

Count how often each word occurs

PACKAGES REQUIRED: wordcloud2 (OPTIONAL: htmlwidgets, webshot)

STEP 4: MAKE WORD CLOUD!

```
23
24 # Subset the data for the word cloud to a manageable size
25 ```{r subset for word cloud}
26 # Too many for word cloud to cope with, choose only words that occur more than three
  times
27 clouddat<-subset(kindTable, n>2)
28 ...
29
30 #Create the word cloud
31 Use a custom palette or built in, I used online palette generators
32 ```{r create the word cloud}
33 # Create Palette
34 kindPalette <- c("#D5B0AC", "#CEA0EA", "#684551", "#402E2A", "#9CD08F")
35
36 mycloud<-wordcloud2(clouddat, color=rep_len(kindPalette, nrow(clouddat)), size=0.5)
37 mycloud
38 # save it in html
39 savewidget(mycld,"kis.html",selfcontained = F)
40 # save as a pdf
41 webshot::install_phantomjs()
42 webshot("kis.html","kis.pdf", delay =20, vwidth = 1500, vheight=1000)
43 ...
44
```

@jennypannell

PACKAGES REQUIRED: wordcloud2 (OPTIONAL: htmlwidgets, webshot)

STEP 4: MAKE WORD CLOUD!

- I used a palette from <https://coolers.co/app> but you can use built-in colours
- Issues: wordcloud2 is glitchy - difficult to customise cloud and save output.

```
23
24 # Subset the data for the word cloud to a manageable size
25 ```{r subset for word cloud}
26 # Too many for word cloud to cope with, choose only words that occur more than three
  times
27 clouddat<-subset(kindTable, n>2)
28 ...
29
30 #Create the word cloud
31 Use a custom palette or built in, I used online palette generators
32 ```{r create the word cloud}
33 # Create Palette
34 kindPalette <- c("#D5B0AC", "#CEA0EA", "#684551", "#402E2A", "#9CD08F")
35
36 mycloud<-wordcloud2(clouddat, color=rep_len(kindPalette, nrow(clouddat)), size=0.5)
37 mycloud
38 # save it in html
39 savewidget(mycld,"kis.html",selfcontained = F)
40 # save as a pdf
41 webshot::install_phantomjs()
42 webshot("kis.html","kis.pdf", delay =20, vwidth = 1500, vheight=1000)
43 ...
44
```

TA-DA!
